

Universal Current Miniature Circuit Breakers 5SY5 and 5SP5

BETA Low-Voltage Circuit Protection

Universal current miniature circuit breakers, also referred to as UC miniature circuit breakers are ideal for use in AC/DC networks.

■ Ideal protection

The 5SY5 and 5SP5 UC miniature circuit breaker series are available from 0.3 A to 125 A in the characteristics B and C. They are the ideal protection for DC systems in buildings and for industrial applications, such as electroplating plants, charging stations, fuel cells and photovoltaic plants. A separate series is available for railway applications.

■ Good combination options

They can also be combined with additional components from the 5SY series, such as auxiliary switches, fault signal contacts, shunt trips, undervoltage releases and remote controlled mechanisms.

Highlights

- UC miniature circuit breakers can be used for 250/440 V AC, as well as for DC up to a maximum of 250 V per pole
- 4-pole 5SY5 version up to max. 1000 V DC
- Available from 0.3 to 125 A
- Approved acc. to EN 60898-2

Answers for infrastructure.

SIEMENS

Miniature Circuit Breakers

5SY and 5SP miniature circuit breakers

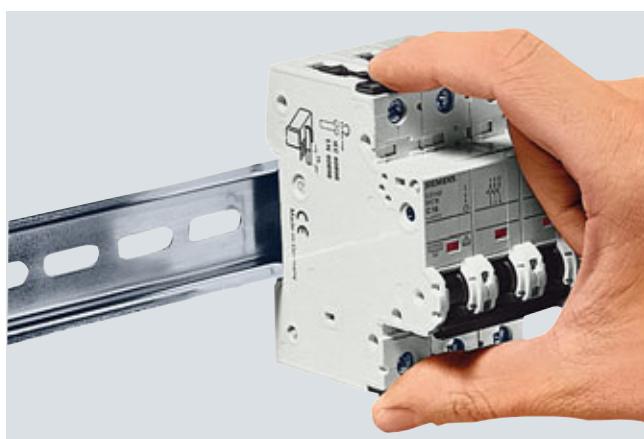

Benefits

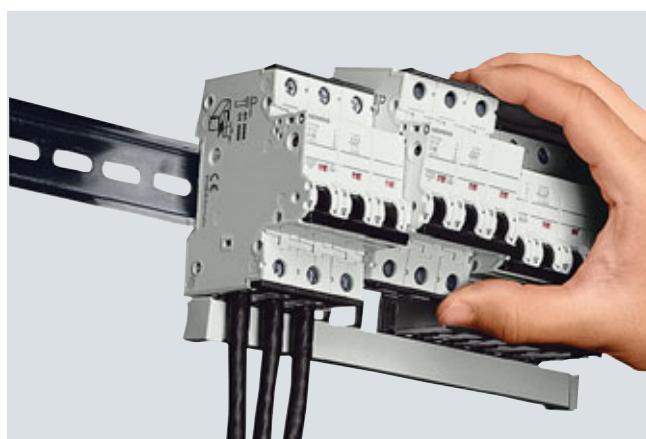

- Optional top or bottom infeed as the terminals are identical
- Clear and visible conductor connection in front of the busbar facilitates controls
- Large and easily accessible wiring space enables easy insertion of conductor in the terminal.

- Integrated movable terminal covers located at the cable entries ensure the terminals are fully insulated when the screws are tightened
- The effective touch protection when grasping the device considerably exceeds the requirements of VBG 4/BGV A3.

- Manual snap-on fixing and release systems that require no tools enable fast assembly and disassembly of MCBs
- Marked labeling field on all modular installation devices for uniform, quick and easy identification.

- Quick and easy manual removal of MCBs from the busbar assembly if connections need to be changed
- Time-saving replacement of parts as busbars no longer need to be freed from adjacent devices.

Characteristic curves

Tripping characteristics acc. to IEC/EN 60898, DIN VDE 0641-11

Tripping characteristic B

MCBs with this tripping characteristic are designed for universal use in socket outlet and lighting circuits. Proof of personal safety acc. to DIN VDE 0100-410 is not required.

Correction factors for rated current if bundling

If more than one electrical circuit is loaded in a series of miniature circuit breakers, the resulting increase in ambient temperature affects the characteristic curve. In this case, you need to include an additional correction factor, which is specific to the rated current of the MCB(s).

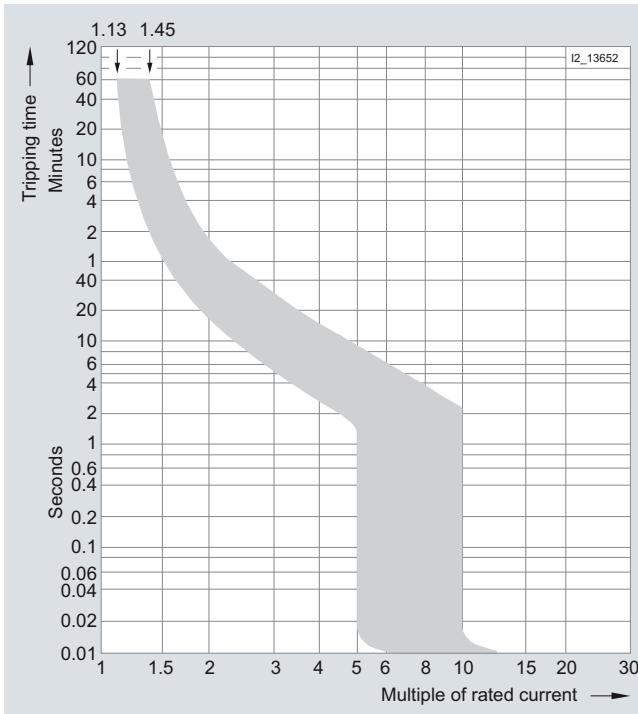

Number of MCBs	1	2 ... 3	4 ... 6	> 7
Correction factor K	1.00	0.90	0.88	0.85

Thermal tripping operation

	Rated current I_n (A)	Correction factor for					
		0 Hz	16 2/3 Hz	50 Hz	125 Hz	400 Hz	1000 Hz
5SY5	0.3 ... 10	1	1	1	1	0.99	0.97
	1 ... 40	1	1	1	0.98	0.97	0.93
	50 ... 63	1	1	1	0.98	0.94	0.86
5SP5	80 ... 125	1	1	1	0.97	0.92	0.85

Magnetic tripping operation

	Rated current I_n (A)	Correction factor for					
		0 Hz	16 2/3 Hz	50 Hz	125 Hz	400 Hz	1000 Hz
5SY5	0.3 ... 63	1.4	1	1	1.2	1.4	1.7
5SP5	80 ... 125	1.5	1	1	1.05	1.3	1.8

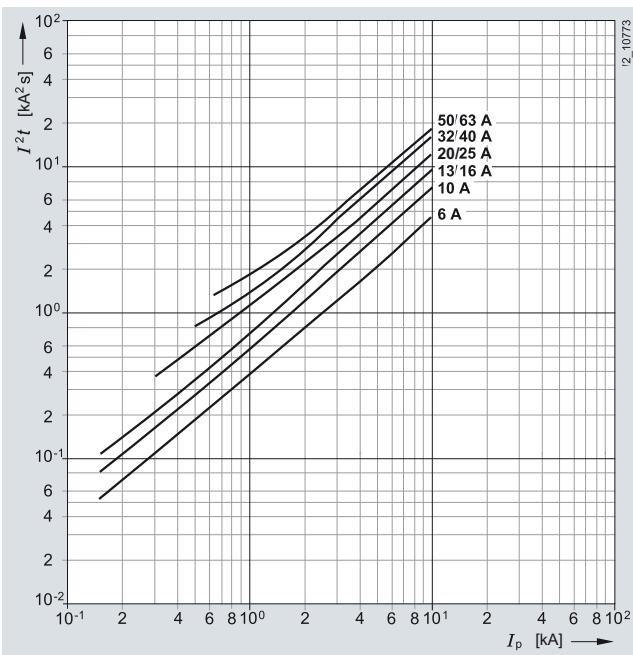

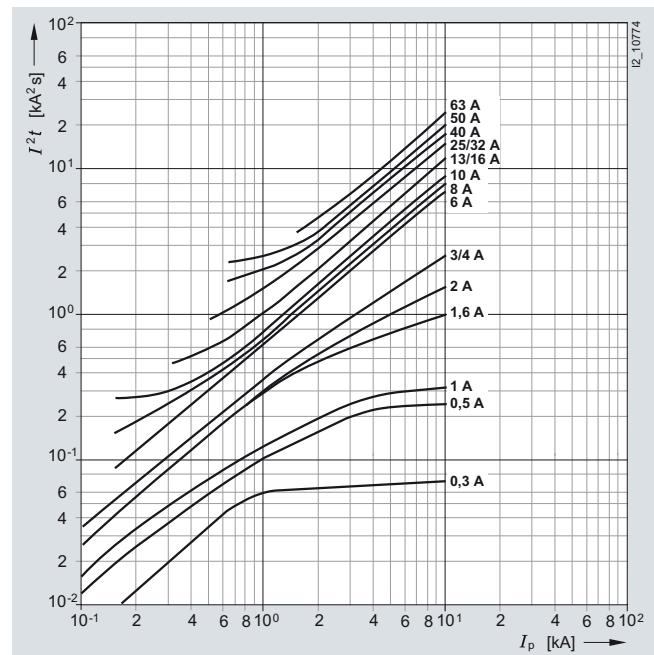

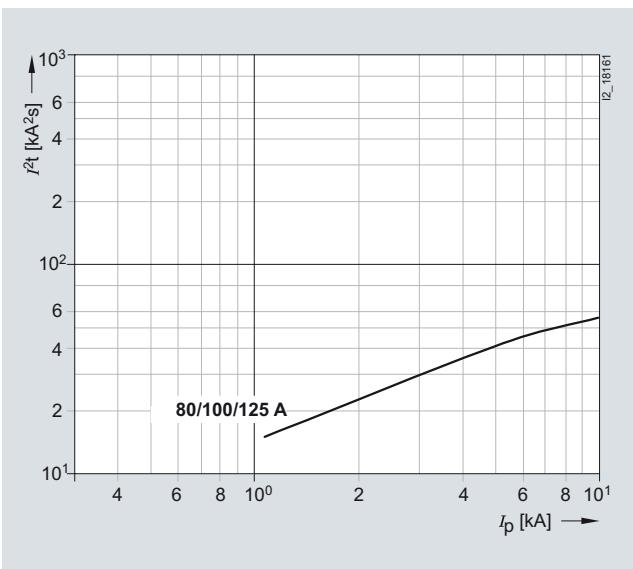

Tripping characteristic C

In lamp and motor circuits with higher starting currents, MCBs with tripping characteristic C are generally used.

Correction factors for rated current at different frequencies

The tripping characteristic applies to a frequency of 50 to 60 Hz. In the case of other frequencies, the following correction factors must be taken into account.

In the overrange, the limits of the characteristic curves correspond to the correction factors of the thermal tripping operation. In the case of a short circuit, the limits of the characteristic curves correspond to the correction factors of the magnetic tripping operation.

Direct current, universal current

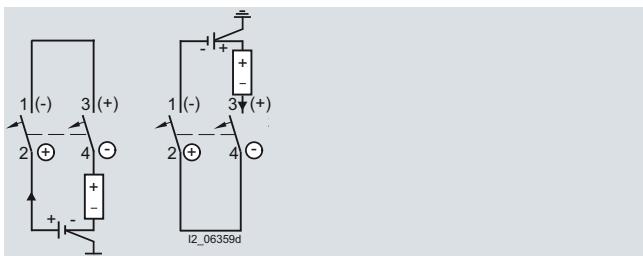

All 5SY and 5SP4 miniature circuit breakers are suitable for use in direct current systems up to 60 V¹⁾ (1-pole) or 120 V (2-pole – series connection of two poles). The infeed can be from either the top or the bottom.

For higher voltages, you will require UC (UC = Universal Current) miniature circuit breakers from the 5SY5 and 5SP5 series, which can be used for both AC and DC applications.

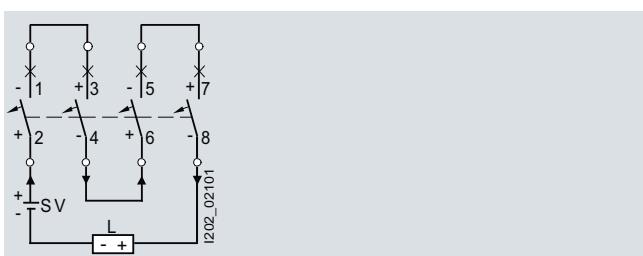

The maximum voltage for DC per pole is 250 V. The series connection of individual poles enables 4-pole devices (for example) to be used up to a maximum of 1000 V DC.

Miniature circuit breaker for single-pole tripping
Grounded system (left: - pole grounded, right: + pole grounded)
Rated voltage of miniature circuit breaker: 220 V

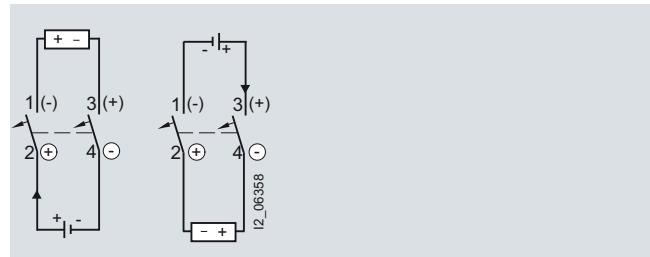

Miniature circuit breaker, two-pole for single-pole tripping
Grounded system (left: - pole grounded and bottom infeed, right: + pole grounded and top infeed)
Rated voltage of miniature circuit breaker: 440 V

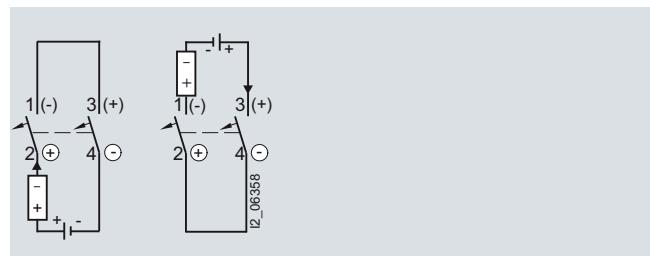

Miniature circuit breaker, four-pole for single-pole tripping
Non-grounded system (bottom infeed)
Rated voltage of miniature circuit breaker: 880 V

The arcing chamber area of the 5SY5 and 5SP5 miniature circuit breakers is equipped with an additional permanent magnet to support the positive quenching of the electric arc.

This is why the polarity of the switch is coded and it is essential to pay attention to the conduction direction when connecting the conductor. Suitable precautions should be taken during plant configuration to ensure there can be no polarity reversal in DC operation (e. g. photovoltaic plants).

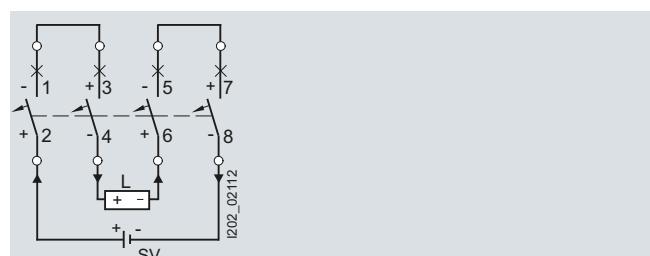

Miniature circuit breaker, two-pole for two-pole tripping
Non-grounded system (left: bottom infeed, right: top infeed)
Rated voltage of miniature circuit breaker: 220 V

Miniature circuit breaker, two-pole for single-pole tripping
Non-grounded system (left: bottom infeed, right: top infeed)

Rated voltage of miniature circuit breaker: 440 V

Miniature circuit breaker, four-pole for two-pole tripping
Non-grounded system (bottom infeed)
Rated voltage of miniature circuit breaker: 880 V

L: Load (e. g. inverter)

SV: Power supply (e. g. solar module or battery)

¹⁾ The operational voltage 60 V DC/pole takes into account a battery charging voltage with a peak value of 72 V.
